

ABS Mobile Guard - flat

Temporary guard rail for flat roofs - secured using weights

Our ABS Mobile Guard - flat guard rail system was specially designed for temporary usage on roofs with a pitch of up to 10° and is weighted down using special weights. It is manufactured from robust, weather-proof aluminium material and is folded up for easy transport. It can be set up in just a few easy steps.

Concrete weights, each weighing 25 kg, are used to secure the posts of our ABS Mobile Guard - flat guard rail system. The posts are simply folded out or folded back up - making them really easy to transport. Once the posts have been set up, the guard rail elements (hand and knee rails) are simply hooked on. Our ABS Mobile Guard - flat system requires a parapet of at least 100 mm and has been certified in accordance with EN 13374, A.

Application

Flat Roofs Guardrail systems

Attachment

ballasted w/o roof penetration

Miscellaneous
